**Napomena:**

Fizička kompatibilnost i mogućnost miješanja preparata ne odnosi se na hemijsku kompatibilnost i rizik od fitotoksibilnosti u vešestrukim kombinacijama. Izbjegavati prskanje s kombinacijama koje nose oznaku (+ -) ako su biljke pod stresom od presađivanja, suske, visoke relativne vlage vazduha u plstenicima, nedostatku svjetlosti u dužem periodu i sl. Ako se radi kurativni tretman onda je najbolje primijeniti jedan pripravak ciljano na problem koji suzbijamo.

 Za sumporne preparate kao što je Thiovit jet treba dodatna pžnja ako temperature zraka prelaze 30°C (izbjegavati prskanje).

**Pravilna priprema sredstva za zaštitu biljaka**

1. Napunimo rezervoar prskalice vodom do 1/3.
2. Ako koristimo folijarno dubrivo ono ide prvo u rezervoar prskalice.
3. Kada se gnojivo rastopi dodajemo praškaste formulacije pesticida WP, WG, DF, SP.
4. Uz mješanje čekamo dok se sredstva potpuno rastopu u prskalicu.
5. Dodajemo tekuće formulacije pesticida u prskalicu EC, EW, SC, DC.
7. Pripremljeno škropivo treba potrošiti u roku 1-2 sata.
